PRESS RELEASE

- OLIDATA: NO DAMAGE SUFFERED FROM ATTEMPTED HACKING ATTACKS THAT OCCURRED OVER THE WEEKEND
- OLIDATA PROTECTS AND STORES DATA IN ITS SERVERS LOCATED EXCLUSIVELY IN ITALY. THIS DATA IS COMPLETELY UNRELATED TO THE INSTITUTIONAL SITE
- THE COMPANY MAKES CYBERSECURITY ONE OF ITS MAIN BUSINESSES, DEVELOPING PROPRIETARY TECHNOLOGIES CAPABLE OF DEALING WITH INTRUSIONS IN JUST 25 SECONDS
- NUMEROUS INSTITUTIONS AND LARGE INDUSTRIAL GROUPS USE OLIDATA'S EXPERTISE TO PROTECT THEIR INFRASTRUCTURES

Rome, January 13 2025. **Olidata Spa (the "Company" or "Olidata") system integrator at the head of a leading group in Italy in the IT sector and with shares listed on the regulated market Euronext Milan, organized and managed by Borsa Italiana S.p.A., announces that its site has not suffered any damage** as a result of the latest hacking attacks made on Italian institutions and companies over the weekend.

Thanks to the preventive actions and constant implementations that the company deploys, **numerous attempts at malicious intrusions are punctually repelled**. **The Olidata site** remains a point of reference for shareholders and all stakeholders, but **the data are totally untethered**.

In fact, **the Group manages and maintains the data on its servers exclusively in Italy, which are in no way connected to the institutional site**. This is because **Olidata makes cybersecurity one of its main businesses**, has several years of experience in the field and today is **one of the leading companies in this market in our country**.

Numerous institutions and large economic and financial players are turning to Olidata experts to deal with growing cyber threats. The company is constantly investing in the development of new proprietary technologies capable of anticipating attacks, preventing intrusions and, if necessary, dealing with them in a timely manner. Worth mentioning is the latest solution designed precisely to network among the main Italian strategic players, **The Oli One**: capable of **monitoring h24 the network** (including deep and dark web), **intercepting the threat in just 25 seconds**, blocking the intrusion and sending an alert not only

to the threatened organization but to all those who use such technology, to pool in real time what is happening. A tool that confronts malicious initiatives and does not allow data to be stolen or entire systems to be crashed.

In light of such investments, even hacking attempts like the one over the weekend were unsuccessful in Olidata's case.

"Our cyber team is one of the flagships of the Group. Our job is to anticipate the moves of hackers, building a network and infrastructure that can cope with and repel attacks such as the ones that occurred recently. Malicious attacks that are commonplace in today's world, but which we manage to prevent and intercept without criticality. Our solutions are adopted by major industrial groups in Italy and beyond, as well as by complex institutions and organizations. We are satisfied with how, also on this occasion, we handled the incident, protecting our site that is a point of reference for all our stakeholders, although not connected in any way with the data we manage," comments **Claudia Quadrino, CEO Olidata**.
